SUMMARY

Bachelor in Systems Engineering from the University of Lima (Top 30%) with a foundational background in programming and data manipulation. Following a practical internship in analytics engineering, I am focused on developing my career within the data field. I am a detail-oriented professional, capable of handling steady workloads and committed to resolving technical bottlenecks as they arise. My goal is to apply my analytical training to help build reliable data structures while continuing to grow my technical expertise in a professional environment.

EDUCATION

- **Bachelor of Science in Systems Engineering – Universidad de Lima (UL)** (April 2019 – December 2024)
| Ranking: Upper Third (Top 30%)

EXPERIENCE

Koala Home | Analytics Engineering Intern (Lima, Peru)

Jan.2025 – Oct. 2025

- **dbt Model Development:** Engineered and maintained data models within Snowflake following the Medallion architecture, expanding the analytical layer to support emerging business needs from Commercial and Operations teams. Managed all code changes through Github to ensure collaborative and organized development.
- **Business Logic Implementation:** Translated complex requirements into scalable SQL transformations, creating new logic to unify distinct data sources (Odoo & Shopify) and ensure metric consistency.
- **Dashboard Development (Looker):** Built and maintained interactive dashboards in Looker, developing the underlying LookML code (views & explores) to visualize these new models for stakeholders.

Key Projects:

- **Commercial Reliability (Overselling Prevention):**
 - Developed a specialized Data Mart combining real-time sales velocity (Shopify) with inventory snapshots (Odoo).
 - Outcome: Deployed a "Stock Monitor" dashboard that alerts the Commercial team about potential overselling risks and "Available to Promise" inventory in real-time.
- **Operations Efficiency (Lead Time Analysis):**
 - Modeled the "Order Journey" fact table by unifying timestamps across the entire fulfillment process (Order Placed - Pick & Pack - Dispatched - Delivered).
 - Outcome: Created an Operational KPI Dashboard to visualize Lead Time per courier and region, enabling the team to detect bottlenecks and improve delivery times.
- **PIM Evolution (Product Data Mart):**
 - Refactored the existing Product Information Management (PIM) Data Mart in dbt to incorporate new attributes.
 - Outcome: Upgraded the PIM Dashboard in Looker, enabling granular filtering that became the foundation for all commercial reporting.

CERTIFICATIONS

- Google Data Analytics Certified
- Machine Learning Specialization

SKILL & TOOLS

- Data Manipulation & Profiling: Python, SQL, R
- Excel – Advanced
- AWS S3, Snowflake, dbt
- Git control system
- Dashboards: Looker, Tableau, PowerBI

LANGUAGES

- English (C1)
- Spanish (Native)
